The most in-depth guide to poultry farming anywhere, right now. "...marvelous and electrifying content. It answers most of the questions I have been looking out for. Thanks a lot." – Kwasi Jones Receive all the 'insider tips' they never speak about to help you: ✓ Write a plan that actually gets investment ✓ Decide if poultry will be profitable for you ✓ Avoid pitfalls like mortality with key procedures ✓ Understand the hidden benefits of production models Type in your email below... Poultry farm project proposal pdf is an essential point to start a poultry farm business, if someone starts a chicken farm business, you need to poultry farm project proposal pdf in your business plan. download the pdf file at end of the post. There is a common question of farmers and poultry producers are how to build a poultry house? how to construct a poultry shed? how to construct a layers house? Requirements for chicken house construction etc. MORE READ- HOW TO START A POULTRY BUSINESS Objective of Poultry farm Proposal Before starting a poultry farm project, you should fix the objectives of the Commercial poultry farm project proposal pdf. There are points about objectives of the Commercial poultry farm project proposal- (i) To know all the technical details of starting a poultry farm. (ii) To calculate expenditure for different heads. (iii) To understand the assumptions underlying the project. (iv) To evaluate the receipts and profitability of the project. Procedure (Steps By Steps) Now we can discuss the whole Commercial poultry farm project proposal according to farm operation I. Working out of technical details and assumptions of the project. 11. Calculation of non-recurring (capital) expenditure by considering cost of housing, equipment, store, supervisors, quarters, watering facility and land development charges, etc. III. Calculation of working capital – Capital needed to run the farm upto the project completion period. It includes cost of chicks, feeds and miscellaneous cost i.e., vaccination, medicine, labour, electricity etc. as applicable. IV. Calculation of total project cost, share of promoter/farmer and bank finance needed; usually farmer's share will be 25% of project cost excluding cost of land. OTHERS CALCULATION V. Calculation of annual recurring expenditure – It includes the cost of chicks, feed, miscellaneous cost, etc. in each year. VI. Calculation of annual gross return – Here total receipts from all sources of income, viz., egg, broiler, manure, empty feed bags are calculated per year basis. VII. Calculation of bank repayment schedule – Here yearly installment of bank loan and interest are calculated. VIII. THE Calculation of net return – It is arrived by subtracting the repaid annual bank loan and annual recurring expenditure from annual gross return. Here project reports for various categories of poultry are prepared, viz., broiler, layer, duck (free range system), duck (intensive system), quail (broiler type), turkey (free range system) and cockerel (all in all out system). Project Costing The project cost may vary depending on the prices prevailing in different Localities, but the method for preparation of project reports is same and the following project reports may be taken as guide. PROJECT REPORT FOR A BROILER FARM The broiler is the fastest growing industry in the world among the other poultry. Now, we are starting to explain, how to prepare a PROJECT REPORT FOR A BROILER FARM Technical details and assumptions 1. House: Open sided, tile roofed, deep litter house. 2. Floor space: Half square feet per bird up to 25 days of age and one square feet per bird there after. 3. Cost of poultry house: Rs. 50/- sq. ft. 4. Other building cost: Rs. 100/-sq. ft. 5. Equipment cost: Rs. 10/- bird. 6. Cost of Medicine, Vaccine, Insurance Labour, Electricity, Fuel, etc.: Rs. 4/- bird. 7. Total number of birds in the farm: 7000 8. Total number of birds per batch (including extra 5%) : 1050 9. Batch interval: 1 week 10. Down time: 1 week 11. Saleable broilers per batch per week: 980 12. Growing period: 45 to 50 days 13. Feed efficiency: 2.22 (average body weight = 1.80 kg) Farm buildings It is the investment of the permanent in the poultry business for several years. the structure and construction are more important for a poultry farm building. Some points should be ignored which is mark out below- (i) Orientation of poultry house Houses are built east-west with long axis facing north and south, and short axis on east and west. TO KNOW MORE – ESSENTIAL TYPES OF POULTRY HOUSE (ii) Construction details Houses are constructed with concrete pillars with brick and cement walls, and floor plastered with cement, elevated one foot above the ground level. The inside height at eaves will be about 7'; while at ridge height will be around 121. LAYOUT The two long sides are provided a one-foot high wall with a 60° inside slope at the top. The partition wall specification is like that of sidewalls. The remaining 51 height is covered with 111 G.1. 12 gauge chain link mesh throughout except at the doors. There will be 31 overhangs of roofs at eaves. The doors are made up of an M. S. angle frame and 111 X 31 I mesh of 10 gauge thickness, with provision to lock from both sides. The two sides are made up of solid brick wall. Roof structure is built by seasoned wood and tiles. The house is provided with 3 phase power supply. (iii) Other buildings The feed room, store and workers, quarters will have brick side walls to the full height. ALSO READ- POULTRY HOUSE DESIGNS (iv) Specification of farm buildings for the project (A) One shed will be 301 x 1201 size outer to outer with 4 pens each of 500 sq. ft. area to accommodate 4 batches x 1000 birds from 0 to 25 days of age with 1/2 sq. ft. /bird. (B) (i) One 400 sq. ft. owner/supervision quarters (ii) 200 x2 = 400 sq. ft. for two workers quarters (iii) 600 sq. ft. feed room (iv) 200 sq. ft. office-cum-store room. (C) Another shed with 301 x 133.31 outer size, partitioned into 4x1000 sq. ft. rooms to rear 4 batches of broilers from 26th day onwards = 4000 sq. ft. Total area required for birds = 2000+4000 = 6000 sq. ft. Total area required for other purposes = 400+400+600+200 sq. ft.=1600 sq. ft. STATEMENT-1 STATEMENT-1 STATEMENT – III Total capital investment, the share of the promoter (margin money), bank finance needed (amount in lakhs of Rs.) STATEMENT – IV STATEMENT – V LESS: Annual expenditure (statement IV) . 23.92 NET RETURNS (before repayment of Bank loan) -32.48-23.92) . 8.56 STATEMENT – VI The annual gross returns during the first year will be Rs. 28.36 lakhs as there will be no sales during the first 7 weeks period; only 45 batches will be sold instead of 52 batches. Therefore, the net surplus before repayment will be Rs. 4.44 Lakhs. Certificate Certified that this project is prepared by me taking into account the prevailing prices of various farm inputs and outputs and the latest technical and production standards. It appears that this project will be technically feasible and financially viable. Enclosures: 1. Land ownership document. 2. Farm site map. 3. Blue print and estimates of farm buildings. Signature DOWNLOAD THE PDF FILE ABOUT BROILER, LAYER AND DUCK PROJECT PROPOSAL IN THUS LINK Follow Us This is Ramzan Ali (DVM), founder of poultrymania.com which is an informational blog about poultry.I have been trying to provide the latest poultry update about the disease, nutrition, vaccines, medicines, and so on others since 2018. The most in-depth guide to poultry farming anywhere, right now. "...marvelous and electrifying content. It answers most of the questions I have been looking out for. Thanks a lot." – Kwasi Jones Receive all the 'insider tips' they never speak about to help you: ✓ Write a plan that actually gets investment ✓ Decide if poultry will be profitable for you ✓ Avoid pitfalls like mortality with key procedures ✓ Understand the hidden benefits of production models Type in your email below... Poultry farming is the easiest establishing and profitable business worldwide. If we think of the protein source which is much need for the human body, poultry farming is the continent and cost- effect source of protein since the ancient period. There is a huge number of people have been involved day by day in this project. It has been started anytime throughout the year. There is no fixed time- tables to start this project. But some basics criteria should be needed before starting which makes it more comfortable for the starters. RELATED POST HOW TO RAISE A BROILER FARMING PROJECT Some basics criteria for starting a poultry farming project given below Land Selection It is a crucial point to established a new layer & broiler farm. The farm should be contacted well-equipped road which easily connects to the town area where egg consumption much higher. poultry farming project should be established beside the well-equipped roadside The road is made by concrete or bitumen highly recommend for the smooth transfer of poultry eggs, culled laying birds, feeds, and storing materials also. The electricity & watering system also facile in this area. Housing Poultry housing depends on the climate, location of land, country's natural resources, costing, selection of area of farm installation, etc. There are two types of housing that are practicing worldwide. RELATED POST POULTRY HOUSE DESIGNS Open shed system This type of housing practice in the countryside area for poultry farming. It is really set up an open shade poultry farming. Local resources are used which varied from country to country fish cum poultry farming which called integrated farming The most common substances employing in Bangladesh are bamboo, wood, stainless tin, wire fence, etc. That why it is cost-effective due to it is easily available throughout the country. But, other country's have different types of substances are utilizing also. Open house poultry rearing system For 100 broiler birds, it takes around 80-80k BDT, and for laying birds 2-2.5 lac BDT. Open flock systems have unique advantages is no need to control temperature and humidity. But, partially control lighting in case of the laying hen. Someone can easily start this business with a small investment.It is best for small-scale poultry farmers. It set up inside the housing area, sometimes install just a feel from the house, someone incorporated with other farming systems like a pig, goat, sheep farming, etc. Control house Control poultry house defined as where all external temperature, humidity, and lighting fully control manually but in modern practice, automation, the system has been incorporated in every poultry producing manufacturer and hatcheries. It requires higher investment and required complicated operational management. Control house used for the production day old chicks, grandparent & parent breeder which require highly hygienic and biosecurity systems that protect any type of poultry diseases. Need high faculties associated with feeding and watering system also. Control shade has multiple disadvantages are Vulnerable to disease outbreak more frequently compared to open shade system, because there is no opportunity to treat the disease due to the higher number of birds and take it is of money. Possibly birds became culled when disease outbreak occurred. Some diseases are always cost- drawing especially in Newcastle disease, Avian influenza, Infectious bronchitis, infectious bursal disease, etc. Chicks There are several types of layers and broiler breeds for the production of meats & eggs. Commercial layer breeds are specifically unique from one another, the most breeds are reared in the field areHy- line brown & whiteISA brown & whiteShaver brownBovensNovogen Layer Chicks In a similar way, commercial, broiler breed are RELATED POST THE MOST COMMON DISEASES OF CHICKS broiler chicks Cobb 500RossArbor meatLohman meatEtc. Chicks pricing It depends on regions to regions throughout the world. In some countries, chicks price has been fixed. but in some countries especially South Asia, chicks price has not been filed yet. RELATED POST BROODING MANAGEMENT BEFORE AND ARRIVAL OF CHICKS That is why prices are staying up & down. In some regions of South Asia, it is not profitable all the time due to the irregularities of the chick's price. Vaccination is an important issue for the poultry farming project. Poultry is always vulnerable to any bacterial, viral, protozoan, mycoplasma, and fungal diseases. Among them, poultry viral disease is the most devastating to any poultry farming project because of lots of mortality and decreased production by the viral outbreak. RELATED POST ESSENTIAL TYPES OF POULTRY VACCINES In addition, there is no specific treatment for viral infection in the world. There are numbers of vaccine all origin are commercially viable in the market. But, proper vaccination technique and timing also much needed otherwise, investment is falling in the ground by a disease outbreak. Related Post Newcastle Disease vaccines Medication the most common medication which is applied in the poultry farm project is anthelmintics, antimycoplasmal drugs, coccidiostat, and anticoccidial drugs, vitamins, and minerals. Download the poultry farm project proposal pdf on broiler, Layer and duck below the link. Related Post Anti-mycoplasmal drugs -TIAMULIN TOP 3 DRUGS FOR FOWL TYPHOID TOP 3 ANTIBIOTICS FOR E.
